Do you want to take part in some interesting research?

We are conducting a study looking at emotions in people with Eating Disorders, which we hope will contribute to develop new treatments for the disorder.

What does it involve?

- **A short interview**
- **Answering questionnaires**
- **Attending one session to do computer tasks**

Who can participate?

- **Women**
- **Between 18-55 years old**
- **Currently diagnosed with an Eating Disorder (Anorexia or Bulimia Nervosa)**

You will get £10 for your participation.

We are currently recruiting for a study looking at emotional characteristics in people with Eating Disorders.

What is the purpose of the study?

The purpose of this study is to look at emotional characteristics that are thought to play a role in the maintenance of eating disorders, making recovery difficult. Previous research suggests that individuals with eating disorders may differ from healthy volunteers on certain aspects of emotional style. New treatments for eating disorders should address emotional characteristics, but further study of emotional difficulties is needed. This study aims to improve our understanding of these emotional difficulties, to inform the development of future treatments.

What will participation involve?

You will be asked to attend one testing session which will last around two hours and during which we will conduct a short interview, you will complete some emotional computerized tasks, and some paper and pencil questionnaires. In addition, we will obtain your height and weight. You will be compensated with £10 for your participation.

Who can take part?

We are recruiting three groups of people for this study:

1. Female individuals with a current Eating Disorder (*aged between 18-55 years, fluent in English, should have a formal diagnosis of anorexia or bulimia nervosa)*

2. Female individuals who have recovered from an Eating Disorder (*aged between 18-55 years, fluent in English, should have been diagnosed with an Eating Disorder in the past, but have no symptoms during the past year)*

3. Female individuals without an Eating Disorder *(aged between 18-55 years, fluent in English, have never suffered from an eating disorder, weight within normal range).*

Unfortunately you will not be able to take part in the study if you:

- Have a diagnosis of psychotic disorder, autism spectrum condition, a severe medical disorder, learning difficulty or have a brain injury.

If you would like some more information about the study please contact Marcela Marin Dapelo (marcela.marin_dapelo@kcl.ac.uk).
